Purpose and boundary

Inspect actual local PDF bytes for supported metadata, tagging and per-page structural conditions.

Parse the actual bounded classic PDF 1.x cross-reference, catalog, page and structure objects locally. Inspect conventional title, default language, marked/suspect flags, per-page structural indicators, standard figure alternative-text presence and supported unfiltered text-showing operators. Preserve original hashes and report unsupported/encrypted/corrupt files explicitly. Human reading order, text alternatives, contrast, form semantics and conformance remain separate unperformed checks.

This browser preparation retains original customer evidence and selected source-approved criteria. Actual manual tests, authorization, delivery, signatures, employment status and legal applicability remain responsible human decisions. PDF checks cover only supported structural indicators, not semantic accessibility or conformance. No external scan, filing, remote AI or provider is called. Exact sources stay in this browser unless explicitly saved through paid private cloud saving.

Supported classic PDF 1.x cross-references only. Encrypted, incremental, hybrid, object-stream and over-bound documents are rejected.

Title uses conventional Info metadata in ASCII or UTF-16BE. Custom structure RoleMap aliases are not classified. XMP title, semantic reading order, meaningful alternatives, contrast, complete form semantics, accessibility-supported use and conformance are not verified.

Structure counts and alternative-text presence do not establish correctness. Text-showing operators are inspected only in supported unfiltered page streams. No scripts/actions/remote sources are executed.

This browser preparation retains original customer evidence and selected source-approved criteria. Actual manual tests, authorization, delivery, signatures, employment status and legal applicability remain responsible human decisions. PDF checks cover only supported structural indicators, not semantic accessibility or conformance. No external scan, filing, remote AI or provider is called. Exact sources stay in this browser unless explicitly saved through paid private cloud saving.
