COMPLIANCE WORKING RECORD

Auto-renewal notice calendar

Fictional sample. Replace every rule, source and date before use.

Document control

Field	Value
Document type	Auto-renewal notice calendar
Document reference	FICTIONAL-CALENDAR-1
Jurisdiction	United States
Version	fictional-v1
Status	Customer-selected calendar prepared
Prepared by	Fictional calendar owner
Prepared on	October 9, 2026
Rule pack	2026-10-09.calendar-control.1
Generated	October 9, 2026

Purpose and boundary

Calculate customer-approved renewal notice dates before each contract renewal and compare actual dispatch evidence.

Match each contract renewal to an exact jurisdiction/product notice rule. Count before the explicit renewal trigger. Preserve the rule version and selected holiday/roll assumptions. Extensions and pauses are unsupported before renewal and prevent calculation. Actual dispatch after the derived cutoff is reported late.

Dates and scopes come from customer-approved declarations. No statutory rule, approval authority, receipt definition, source currency, business calendar or permission is inferred. No filing, notice, reminder delivery, external provider call or scheduled cloud check occurs. Inputs and history stay in this browser unless explicitly saved through paid private cloud saving.

Declared calendar scope and clock

Fictional selected population. Replace every rule, source and date before use.

Review scope date or instant 2026-10-09. Calendar days count from day zero. Month shifts clamp to month end. Business days exclude Saturdays, Sundays and only the selected explicit dates. Hours use elapsed UTC time.

Complete named findings

1 declared items, 1 findings and 1 private calendar events.

Formal report shows the first 100 findings with at most 1000 characters per field. The complete Excel, CSV and JSON preserve all accepted findings, scope fields and sources.

Kind	Reference	Result	Finding
Renewal notice cutoff	ITEM-1	Completed by declaration	Selected trigger, versioned rule, excluded dates and approved adjustments determine this mechanical cutoff.

Declared event dates

These private tentative events record selected dates. They do not file, send, schedule, monitor or authorize an activity. Date-only event ends are exclusive.

Reference	Event	Date or UTC instant	Source
ITEM-1	Fictional customer case renewal notice cutoff	October 16, 2026	RULE-1 customer-approved-v1. Fictional customer policy. Replace before use.

Observed local history window

0 retained local save/review/backup observations, at most 500. Imported history is a declaration, not authenticated audit evidence.

Unresolved items and limitations

- Customer approvals, actual completion, source correctness, legal applicability and population completeness remain unverified.

Limitations

- Dates and scopes come from customer-approved declarations. No statutory rule, approval authority, receipt definition, source currency, business calendar or permission is inferred. No filing, notice, reminder delivery, external provider call or scheduled cloud check occurs. Inputs and history stay in this browser unless explicitly saved through paid private cloud saving.
