Purpose and boundary

Generate consistent formal PDF, Word and Excel outputs from one explicitly confirmed exact-text table and its source attachments.

Validate distinct table headings and exact-width text rows. Require the customer confirmation name and date. Generate the same frozen table into all three formats, with every confirmed record rendered in PDF/Word and complete Excel/JSON values.

Customer facts, source bytes, file metadata, approvals and declared dates stay in this browser. Mechanical findings do not authenticate provenance, approval authority, source correctness, legal applicability, redaction completeness or unrecorded events. No remote source is fetched, file is deleted or external provider is called.

Declared review scope

Fictional evidence population. Replace every fact before use.

Review findings

3 source-linked findings. Indexed 2, Confirmed declaration 1.

Formal report findings display at most 100 rows and 1000 characters per field. Complete accepted inputs and findings remain in Excel and JSON.

Kind	ID	Result	Finding
Exact local file	f1	Indexed	Exact original bytes retained. Provenance remains customer-declared.
Exact local file	f2	Indexed	Exact original bytes retained. Provenance remains customer-declared.
Confirmed dataset	FICTIONAL-REVIEW-1	Confirmed declaration	2 complete rows, 2 fields. All formats use the same frozen exact-text values.

Unresolved items and limits

- Customer statements, authority and source correctness remain unverified.

Limitations

- Customer facts, source bytes, file metadata, approvals and declared dates stay in this browser. Mechanical findings do not authenticate provenance, approval authority, source correctness, legal applicability, redaction completeness or unrecorded events. No remote source is fetched, file is deleted or external provider is called.
