Named method and supported scope

Keep report type, decision maker, date, exact legal authority, jurisdiction basis and customer due date distinct. Match every customer-selected required field to all supplied values and sources. Retain optional and additional fields, missing values and ambiguity. Output the full draft as not filed.

The customer must select the correct and complete checklist for initial, annual, rejected or other reports. No regulatory deadline calculation, government submission, blocking or rejection occurs.

Original evidence bytes, annotations and customer rules remain in this browser unless explicitly approved for paid cloud saving. Customer verification and approval are declarations. Mechanical results do not authenticate source facts, decide legal applicability, clear screening hits, authorize transactions, classify exports, file reports or establish total wealth.

Only the supplied population is evaluated. Source annotations do not prove completeness, authenticity, reviewer authority or external screening. Missing and conflicting evidence remains visible.

Every accepted finding and original source reference is retained. Supplied text is not silently shortened. Original files are copied only into a local full backup or an explicitly approved artifact operation.

Recovery and original attachment boundary

The complete local ZIP includes every original file listed in the retained manifest. A structured JSON or cloud record alone preserves the descriptor and annotation, not the original file bytes. Attach matching bytes before producing a complete original-attachment pack.

Customer recovery restores neither source authentication, approval authority nor paid export access. Payment ownership is checked before each commercial export.
