Purpose and boundary

Normalize original incident timestamps and uncertainty intervals without silently assigning a timezone.

Require seconds and confirmed UTC offsets for every event. Normalize exact instants and interval endpoints to UTC, sort deterministically, calculate elapsed spans and distinguish definite order from overlapping uncertainty. Preserve original timestamps, source pointers and declared sequence dependencies.

This working pack organizes customer-supplied incident facts, original evidence, approved rule versions and recorded decisions. It does not decide legal applicability, notification duties, statutory deadlines, insurance coverage, AI seriousness, product exploitation, authenticity or sanctions clearance. No report, message, authority filing or payment is sent. Original files remain unchanged and browser-local unless explicitly saved through paid private cloud saving.

Approved scope and incident preparation method

Fictional exercise only. Two confirmed supplied events and one selected approved duty where applicable. Replace every fact, rule and source before use.

Scope approval. FICTIONAL-SCOPE-1

Approved method. Fictional approved preparation procedure 1. Source. f1. Locator. /methodVersion. Approver. Fictional authorized procedure approver. Approval date. 2026-01-01T12:00:00Z

Population statement. Declared complete population. Customer-declared count. 2
