Purpose and boundary

Build a source-linked breach chronology with exact event intervals, dependencies and response actions.

Order customer-reported discovery, awareness, exposure, containment and recovery events by exact UTC instants. Preserve original offsets and uncertain intervals. Detect reversed intervals, future facts, conflicting source facts and impossible declared event dependencies. Assemble a complete chronology and evidence-linked response narrative.

This working pack organizes customer-supplied incident facts, original evidence, approved rule versions and recorded decisions. It does not decide legal applicability, notification duties, statutory deadlines, insurance coverage, AI seriousness, product exploitation, authenticity or sanctions clearance. No report, message, authority filing or payment is sent. Original files remain unchanged and browser-local unless explicitly saved through paid private cloud saving.

Approved scope and incident preparation method

Fictional exercise only. Two confirmed supplied events and one selected approved duty where applicable. Replace every fact, rule and source before use.
