

COMPLIANCE WORKING RECORD

Vulnerability deduplicator

Fictional sample. Requires tailoring and responsible review.

Document control

Field	Value
Document type	Vulnerability deduplicator
Document reference	17-vulnerability-deduplicator
Jurisdiction	United States
Version	2026-10-09.local-interchange.1
Status	Named review prepared
Prepared by	Fictional Responsible reviewer
Prepared on	October 9, 2026
Generated	October 9, 2026

Purpose and boundary

Merge repeated findings while preserving every source record and conflicting state.

Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Method and exact sources

Method revision 2026-10-09.local-interchange.1.

Group exact asset ID, component ID, component version and vulnerability ID. Merge only groups with consistent severity and status. Retain all scanner and source finding references in the working group. Conflicting states remain separate and unresolved. No fuzzy CVE alias, version or asset matching occurs.

Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Review result

3 source-linked findings. 0 unresolved or failed findings.

- Group exact asset ID, component ID, component version and vulnerability ID. Merge only groups with consistent severity and status. Retain all scanner and source finding references in the working group. Conflicting states remain separate and unresolved. No fuzzy CVE alias, version or asset matching occurs.

- Original files are unchanged. Working artifacts are separate and withheld when their required checks fail.

Measure	Value
Original files	1
Working artifacts	1
Unresolved findings	0

Consistent vulnerability groups

The first 25 working rows appear here. Each working preview is limited to 1000 characters. Complete rows and all exact source values remain in Excel and JSON.

Reference	Working result
-----------	----------------

Reference	Working result
Fictional scanner A	scanner Fictional scanner A; finding id A1; asset id ASSET1; component id COMPONENT1; component version 1; vulnerability id CVE-2026-00001; severity High; status Reported; source ref FICTIONAL-SOURCE; original severity High; source position Primary / 2; source count 2; scanner refs [{"scanner":"Fictional scanner A","finding_id":"A1","source_ref":"FICTIONAL-SOURCE","source_position":"Primary / 2"},{"scanner":"Fictional scanner B","finding_id":"B1","source_ref":"FICTIONAL-SOURCE","source_position":"Primary / 3"}]

Source-linked checks

The formal report shows at most the first 100 named check rows and 400 characters per displayed field. Complete values, result columns, sources and output are retained in the Excel and JSON files.

Reference	Result	Finding
["ASSET1","COMPONENT1","1","CVE-2026-00001"]	Grouped	Consistent exact identity grouped with every contributing source reference.

Unresolved items and limitations

- Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Limitations

- Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.
