COMPLIANCE WORKING RECORD

Geolocation file validator

Fictional sample. Requires tailoring and responsible review.

Document control

Field	Value
Document type	Geolocation file validator
Document reference	36-geolocation-file-validator
Jurisdiction	United States
Version	2026-10-09.local-interchange.1
Status	Named review prepared
Prepared by	Fictional Responsible reviewer
Prepared on	October 9, 2026
Generated	October 9, 2026

Purpose and boundary

Check GeoJSON coordinates, geometry structure and approved required properties.

Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Method and exact sources

Method revision 2026-10-09.local-interchange.1.

Inspect RFC 7946 GeoJSON geometry, Feature and FeatureCollection structures. Check numeric longitude/latitude bounds, coordinate dimensions, line lengths, closed rings, ring winding, bounding boxes and declared required properties. Preserve null or empty geometry as unresolved. Flag antimeridian segments and unsupported coordinate reference systems. A structural check does not prove land location, area, ownership or due diligence.

Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Review result

3 source-linked findings. 0 unresolved or failed findings.

- Inspect RFC 7946 GeoJSON geometry, Feature and FeatureCollection structures. Check numeric longitude/latitude bounds, coordinate dimensions, line lengths, closed rings, ring winding, bounding boxes and declared required properties. Preserve null or empty geometry as unresolved. Flag antimeridian segments and unsupported coordinate reference systems. A structural check does not prove land location, area, ownership or due diligence.

- Original files are unchanged. Working artifacts are separate and withheld when their required checks fail.

Measure	Value
Original files	2
Working artifacts	0
Unresolved findings	0

Coordinate index

The first 25 working rows appear here. Each working preview is limited to 1000 characters. Complete rows and all exact source values remain in Excel and JSON.

Reference	Working result
/features/0/geometry/coordinates/0/0	JSON pointer /features/0/geometry/coordinates/0/0; Longitude 10; Latitude 10; Altitude
/features/0/geometry/coordinates/0/1	JSON pointer /features/0/geometry/coordinates/0/1; Longitude 11; Latitude 10; Altitude
/features/0/geometry/coordinates/0/2	JSON pointer /features/0/geometry/coordinates/0/2; Longitude 11; Latitude 11; Altitude
/features/0/geometry/coordinates/0/3	JSON pointer /features/0/geometry/coordinates/0/3; Longitude 10; Latitude 11; Altitude
/features/0/geometry/coordinates/0/4	JSON pointer /features/0/geometry/coordinates/0/4; Longitude 10; Latitude 10; Altitude

Feature index

The first 25 working rows appear here. Each working preview is limited to 1000 characters. Complete rows and all exact source values remain in Excel and JSON.

Reference	Working result
/features/0	JSON pointer /features/0; Feature ID PARCEL1; Geometry type Polygon

Source-linked checks

The formal report shows at most the first 100 named check rows and 400 characters per displayed field. Complete values, result columns, sources and output are retained in the Excel and JSON files.

Reference	Result	Finding
primary	Retained	Complete parsed index and exact original bytes retained.
	Indexed	Exact positions and feature paths retained. Topology, area and domain applicability remain outside this check.

Unresolved items and limitations

- Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Limitations

- Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.
