

COMPLIANCE WORKING RECORD

Document metadata scrubber

Fictional sample. Requires tailoring and responsible review.

Document control

Field	Value
Document type	Document metadata scrubber
Document reference	9-document-metadata-scrubber
Jurisdiction	United States
Version	2026-10-09.local-interchange.1
Status	Named review prepared
Prepared by	Fictional Responsible reviewer
Prepared on	October 9, 2026
Generated	October 9, 2026

Purpose and boundary

Remove selected hidden properties from a separate supported DOCX or PDF working copy.

Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Method and exact sources

Method revision 2026-10-09.local-interchange.1.

Inspect actual package or PDF metadata, remove only selected property categories, and inspect the resulting working copy again. Retain exact original bytes. DOCX changes only supported core, application and custom property parts. PDF supports unencrypted classic cross-reference documents with a single revision and directly bounded metadata. Unsupported signatures, revisions, compressed object tables or metadata structures are rejected before producing a copy. Content, comments, revisions, attachments and visible author text are outside this metadata operation.

Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Source	Filename	Bytes	SHA-256

Remove author and organization properties	Yes
Remove title, subject and keywords	Yes
Remove creation and modification dates	Yes
Remove custom properties	Yes

Review result

9 source-linked findings. 0 unresolved or failed findings.

- Inspect actual package or PDF metadata, remove only selected property categories, and inspect the resulting working copy again. Retain exact original bytes. DOCX changes only supported core, application and custom property parts. PDF supports unencrypted classic cross-reference documents with a single revision and directly bounded metadata. Unsupported signatures, revisions, compressed object tables or metadata structures are rejected before producing a copy. Content, comments, revisions, attachments and visible author text are outside this metadata operation.
- Original files are unchanged. Working artifacts are separate and withheld when their required checks fail.

Working-copy metadata

The first 25 working rows appear here. Each working preview is limited to 1000 characters. Complete rows and all exact source values remain in Excel and JSON.

Source-linked checks

The formal report shows at most the first 100 named check rows and 400 characters per displayed field. Complete values, result columns, sources and output are retained in the Excel and JSON files.

Reference	Result	Finding
primary	Retained	Complete parsed index and exact original bytes retained.
	Removed	Selected properties were inspected again in the separate working copy.
	Removed	Selected properties were inspected again in the separate working copy.
	Removed	Selected properties were inspected again in the separate working copy.
	Removed	Selected properties were inspected again in the separate working copy.
	Removed	Selected properties were inspected again in the separate working copy.

Reference	Result	Finding
	Removed	Selected properties were inspected again in the separate working copy.
	Removed	Selected properties were inspected again in the separate working copy.
	Checked	Original bytes preserved. Content, annotations and revisions are outside this metadata operation.

Unresolved items and limitations

- Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.

Limitations

- Working results use exact local sources and explicitly selected versions. Originals remain unchanged in this browser. No source authenticity, population completeness, vulnerability exploitability, legal applicability, license conclusion, consent validity, food safety or external submission is established.
