Named method and supported scope

Join consultation question IDs to one current approved position, retain contradictions and factual gaps, and calculate calendar days until the supplied closing date. Include exact approved wording and every unresolved question.

No regulator submission, acceptance or representation that supplied facts are independently authenticated. Up to 100 records per table.

All original evidence, approved rules, recipient events and factual verification remain customer declarations. File hashes establish retained byte identity only.

The tool does not decide credibility, legal applicability, publication, competence, participation, signature, delivery, regulator acceptance or submission.

Prepared results preserve complete accepted records. Recovery never creates payment, source authentication, fresh consent or approval authority.

Recovery and original attachment boundary

The complete local ZIP includes every original file listed in the retained manifest. A structured JSON or cloud record alone preserves the descriptor and annotation, not the original file bytes. Attach matching bytes before producing a complete original-attachment pack.

Customer recovery restores neither source authentication, approval authority nor paid export access. Payment ownership is checked before each commercial export.
