Named method and supported scope

Join exact selected provision/questions and fact IDs. Check fact validity, source dates, latest unique qualified review and actor role/authority expiry. Require one exact authorized response for applicable provisions and preserve not-applicable contradictions and all draft text.

No SAM lookup, authenticated signature, eligibility finding, certification or external submission. Up to 100 records per table within 100,000 UTF-8 bytes for the complete input, 300,000 bytes for the complete result and 500,000 bytes for the workspace. Up to 20 original files, 10,000,000 bytes per original and 25,000,000 combined original bytes. Aggregate capacity rejects rather than truncates. Or

iginals stay in this browser unless the customer explicitly authorizes paid cloud saving.

Customer originals, observations, approvals and applicability remain source-attributed declarations. Hashes establish retained byte identity only.

No forced-labor or deforestation clearance, identity or tax decision, clinical determination, certification, regulator filing, recipient message or external submission occurs.

Complete accepted records and exact original bytes remain recoverable. Restore confers no fresh payment, consent, source authentication or approval authority.

Recovery and original attachment boundary

The complete local ZIP includes every original file listed in the retained manifest. A structured JSON or cloud record alone preserves the descriptor and annotation, not the original file bytes. Attach matching bytes before producing a complete original-attachment pack.

Customer recovery restores neither source authentication, approval authority nor paid export access. Payment ownership is checked before each commercial export.
