Purpose and boundary

Assemble a retention schedule from selected requirements, business purposes and approved periods.

Group exact record classes, systems and data categories with source-selected triggers, minimum/maximum/fixed periods and approved business justifications. Compare incompatible periods and hold scope. Mixed calendar units require actual trigger dates before compatibility is confirmed. Retain each operative provision and approval without inventing mandatory retention periods.

This customer-prepared control pack retains exact source facts, operative rules, instrument text, responsible decisions and actual execution evidence. It does not determine legal applicability, approve a transfer, authenticate consent, execute deletion, sanitize media or make a filing. Imported non-US instruments require explicit customer approval. Exact originals stay browser-local unless explicitly saved through paid private cloud saving.
