COMPLIANCE WORKING RECORD

Sustainability target progress calculator

Fictional sample. Requires tailoring and responsible review.

Document control

Field	Value
Document type	Sustainability target progress calculator
Document reference	36-sustainability-target-progress-calculator
Jurisdiction	United States
Version	2026-10-09.quantitative-workflow.1
Status	Named calculation prepared
Prepared by	Fictional Analysis owner
Prepared on	October 9, 2026
Generated	October 9, 2026

Purpose and boundary

Calculate progress against explicit sustainability baselines, targets and dates.

Calculations use supplied observations and explicitly approved methods. Original files and prior work remain in this browser. Results do not establish source authenticity, population completeness, causation, regulatory compliance or approval to make a customer, supplier, lending or model decision.

Method and exact sources

Method revision 2026-10-09.quantitative-workflow.1.

For each target, calculate (actual minus baseline) divided by (target minus baseline) times 100. Compare observation dates with the baseline and target dates. Show current value, remaining change, progress and customer-selected linear path comparison. Maintain targets use absolute tolerance instead of an undefined percentage. Preserve direction, units, versions and source references.

Calculations use supplied observations and explicitly approved methods. Original files and prior work remain in this browser. Results do not establish source authenticity, population completeness, causation, regulatory compliance or approval to make a customer, supplier, lending or model decision.

Absolute calculation tolerance	0

Review result

3 source-linked findings. 0 unresolved or undefined findings.

- For each target, calculate (actual minus baseline) divided by (target minus baseline) times 100. Compare observation dates with the baseline and target dates. Show current value, remaining change, progress and customer-selected linear path comparison. Maintain targets use absolute tolerance instead of an undefined percentage. Preserve direction, units, versions and source references.

- Original sources remain unchanged. Displayed decimals use six places; decisions compare exact rational values.

Measure	Value
Source records	1
Approved rule records	1
Retained	2
On supplied linear path	1

Target progress

The first 25 calculated rows appear here. Each calculation preview is limited to 1000 characters. Complete rows and all exact source values remain in Excel and JSON.

Reference	Calculation
TARGET1	target id TARGET1; unit kg CO2e; baseline value 100; target value 80; progress percent 50; remaining change -10; linear path value 90; linear path gap 0; working status On supplied linear path; model version FICTIONAL-1

Source-linked checks

The formal report shows at most the first 100 named check rows and 400 characters per displayed field. Complete values, result columns, sources and output are retained in the Excel and JSON files.

Reference	Result	Finding
Primary / 2	On supplied linear path	Explicit target and linear path assumptions compared. Maintain targets have no progress percentage.

Unresolved items and limitations

- Calculations use supplied observations and explicitly approved methods. Original files and prior work remain in this browser. Results do not establish source authenticity, population completeness, causation, regulatory compliance or approval to make a customer, supplier, lending or model decision.

Limitations

- Calculations use supplied observations and explicitly approved methods. Original files and prior work remain in this browser. Results do not establish source authenticity, population completeness, causation, regulatory compliance or approval to make a customer, supplier, lending or model decision.
