Purpose and boundary

Prepare evidence for the customer-selected Cyber Essentials requirements and actual technical scope.

Bind the selected technical requirements version to internet-facing boundaries, devices and cloud services. Keep five technical control areas distinct and map actual implementation and evidence. Record scope exclusions, shared provider responsibility and deficiencies. Preparation does not perform an accredited assessment or issue certification.

These working records compare customer-approved criteria, declared scope, actual implementation narratives and exact local evidence. They do not determine legal applicability, certification, authorization, assurance, source authenticity or completeness of an unsupplied requirement library. Original files remain unchanged in this browser unless explicitly saved through paid private cloud saving.
