Purpose and boundary

Track a selected NIST 800-171 revision against actual CUI systems and evidence.

Require explicit Revision 2 or Revision 3 selection and contract-confirmed requirement version. Validate revision-specific requirement identifiers without converting one revision into another. Map actual CUI systems, implementation narratives, owners, reviewed evidence and deficiencies. Never infer the contract requirement or calculate an unsupported assessment score.

These working records compare customer-approved criteria, declared scope, actual implementation narratives and exact local evidence. They do not determine legal applicability, certification, authorization, assurance, source authenticity or completeness of an unsupplied requirement library. Original files remain unchanged in this browser unless explicitly saved through paid private cloud saving.

Approved scope and requirement version

Fictional actual system/process and customer-approved requirement selection. Requires tailoring.

Unresolved items and limitations

- Customer declarations and source authenticity require responsible review. No certification, authorization or assurance is issued.

Limitations

- These working records compare customer-approved criteria, declared scope, actual implementation narratives and exact local evidence. They do not determine legal applicability, certification, authorization, assurance, source authenticity or completeness of an unsupplied requirement library. Original files remain unchanged in this browser unless explicitly saved through paid private cloud saving.
