Purpose and boundary

Organize PCI DSS 4.0.1 evidence for a declared assessment route and cardholder-data boundary.

Require explicit PCI DSS 4.0.1, selected SAQ or ROC route and a declared cardholder-data environment. SAQ selection remains a customer approval. Resolve supplied criterion versions, service-provider responsibilities, evidence periods and identified gaps. This pack never issues a self-assessment, ROC or attestation.

These working records compare customer-approved criteria, declared scope, actual implementation narratives and exact local evidence. They do not determine legal applicability, certification, authorization, assurance, source authenticity or completeness of an unsupplied requirement library. Original files remain unchanged in this browser unless explicitly saved through paid private cloud saving.

Approved scope and requirement version

Unresolved items and limitations

- Customer declarations and source authenticity require responsible review. No certification, authorization or assurance is issued.

Limitations

- These working records compare customer-approved criteria, declared scope, actual implementation narratives and exact local evidence. They do not determine legal applicability, certification, authorization, assurance, source authenticity or completeness of an unsupplied requirement library. Original files remain unchanged in this browser unless explicitly saved through paid private cloud saving.
