Purpose and boundary

Prepare asset-specific cyber threat and vulnerability scenarios with evidence and approved risk judgments.

Resolve asset, business objective, threat event, vulnerability and adverse consequence for each scenario. Validate exact approved scale definitions and matrix pairs, source-backed likelihood/impact judgments, control evidence, residual rationale and treatments. Preserve uncertainties and uncovered declared assets.

Customer-approved scope, risk judgments, licensed criteria, source observations and management decisions remain explicit. This preparation does not determine legal applicability, certification, misconduct, source authenticity, population completeness or assurance. No risk reduction is inferred from a listed control. Original files remain unchanged and browser-local unless explicitly saved through paid private cloud saving.

Unresolved items and limitations

- Customer-approved scope, risk judgments, licensed criteria, source observations and management decisions remain explicit. This preparation does not determine legal applicability, certification, misconduct, source authenticity, population completeness or assurance. No risk reduction is inferred from a listed control. Original files remain unchanged and browser-local unless explicitly saved through paid private cloud saving.
