Purpose and boundary

Prepare an approved risk appetite statement and exact observed-threshold comparisons.

Bind each metric to an approved definition, exact unit, observation period, threshold direction and owner. Compare finite decimal observations with approved inclusive or exclusive thresholds using exact integer arithmetic. Preserve the signed difference, actual evidence, breach response and review dates. Never combine currencies, units or periods, or invent management appetite.

Customer-approved scope, risk judgments, licensed criteria, source observations and management decisions remain explicit. This preparation does not determine legal applicability, certification, misconduct, source authenticity, population completeness or assurance. No risk reduction is inferred from a listed control. Original files remain unchanged and browser-local unless explicitly saved through paid private cloud saving.
