Purpose and boundary

Index actual review evidence by selected review criterion, version, scope and accountable custodian.

Join each indexed record to its customer-selected review criterion and document version. Require actual source bytes and distinguish a supplied record from a reviewer-accepted record. Acceptance needs its actual reviewer/date. The index supplies no independent assurance opinion.

This register checks customer-declared records, versions, scope, dates and exact source links. It does not authenticate source authority, consent, approvals, legal applicability, eligibility or population completeness. Exact inputs and files stay in this browser unless explicitly saved through paid private cloud saving. It does not fetch, send or change external records.

Declared review scope

Fictional selected scope. Quarterly access-review evidence requested by the independent reviewer

Named register population

Current facts and every selected version remain complete in the Excel and JSON outputs. This formal preview shows the first 20 register identities and selected task facts.

Review findings

1 selected record versions, 1 current consistent records and 0 unresolved or outstanding findings.

Formal report findings display at most 100 rows and 1000 characters per field. Complete accepted task rows, selected versions, exact expected population and findings remain in Excel and JSON.

Kind	Reference	Result	Finding
Expected record	RECORD-1	Declared requirement retained	Customer-approved exact record/version/scope requirement and source bytes retained.
Named versioned record	RECORD-1	Consistent declared record	Task-specific fields, declared version, scope, dates and exact local source links are consistent. No authority or substantive correctness is authenticated.
Exact local source	f1	Linked source	Exact original bytes retained. Publisher identity, source authority and contents remain unauthenticated.
