Purpose and boundary

Track findings, corrective actions, dependencies, deadlines and actual reviewer completion.

Tie the action to its finding and approved correction. Check missing prerequisites, cycles and overdue targets. Completion requires the actual correction result and reviewer evidence. A customer-selected completion state never closes prerequisites automatically.

This ledger records customer-supplied facts, decisions, evidence and selected requirements. It does not authenticate consent, signatures, authority, completion, legal applicability or population completeness. It does not send, file, approve, execute a provider operation or change an external system. Exact inputs and files stay in this browser unless explicitly saved through paid private cloud saving.

Declared review scope

Fictional selected population. Correct the missing reviewer sign-off for the selected access sample

## Named task population

Current facts and every reported stage snapshot remain complete in the Excel and JSON outputs. This formal preview shows the first 20 task identities and selected task facts.

| Item   | State     | Owner                    | Facts                                                                                                                                                                                                                     |
|--------|-----------|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TASK-1 | Completed | Fictional workflow owner | Finding reference. Finding reference. Correct the missing reviewer sign-off for the selected access sample Approved Correction. Approved Correction. Correct the missing reviewer sign-off for the selected access sample |

## Review findings

1 selected task items, 1 consistent customer-declared completions and 0 unresolved or outstanding findings.

Formal report findings display at most 100 rows and 1000 characters per field. Complete accepted task rows, stage snapshots, reported transitions, selected requirement population and findings remain in Excel and JSON.

| Kind                     | Reference | Result                  | Finding                                                                                                                                |
|--------------------------|-----------|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Reported task transition | EVENT-1   | Sequence checked        | Named transition, actor, exact offset chronology, stage facts and actual source bytes checked. The activity remains customer-reported. |
| Reported task transition | EVENT-2   | Sequence checked        | Named transition, actor, exact offset chronology, stage facts and actual source bytes checked. The activity remains customer-reported. |
| Named task item          | TASK-1    | Complete by declaration | The task-specific reported sequence, required stage facts and selected evidence are consistent. Completion remains customer-declared.  |
| Exact local source       | f1        | Linked source           | Exact original bytes retained. Source authority, identity and contents remain unauthenticated.                                         |

## Selected exact attachments

## Unresolved items and limits

### Limitations

- This ledger records customer-supplied facts, decisions, evidence and selected requirements. It does not authenticate consent, signatures, authority, completion, legal applicability or population completeness. It does not send, file, approve, execute a provider operation or change an external system. Exact inputs and files stay in this browser unless explicitly saved through paid private cloud saving.
